## ■ Safety Precautions

1. The design this product contains special hardware and many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the product should not be made. Any design alterations of the product should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the product have special safety — related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of service manual. Electrical components having such features are identified by shading and (  $\Delta$  ) on the schematic diagram and by (  $\Delta$  ) on the parts list in the service manual. The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of service manual may create shock, fire, or other hazards.
4. The leads in the products are routed and dressed with ties, clamps , tubings, barriers and the like to be separated from live parts, high temperature parts, moving parts and or sharp edges for the prevention of electric shock and fire hazard. When service is required, the original lead routing and dress should be observed, and it should be confirmed that they have been returned to normal, after reassembling.
5. Leakage current check (Electrical shock hazard testing)  
After re — assembling the product, always perform an isolation check on the exposed metal parts of the product (antenna terminals, knobs, metal cabinet, screw heads, headphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock. Do not use a line isolation transformer during this check.
  - Plug the AC line cord directly into the AC outlet. using a "Leakage current tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground. Any leakage current must not exceed 0.5mA AC(r.m.s.)
  - Alternate check method  
Plug the AC line cord directly into the AC outlet. Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 ohms 10W resistor paralleled by a  $0.15 \mu F$  AC type capacitor between an exposed metal part and a known good earth ground. Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.75V AC(r.m.s.).This corresponds to 0.5mA AC(r.m.s.).

## ◆ Warning

1. This equipment has been designed and manufactured to meet international safety standards.
2. It is the legal responsibility of the repairer to ensure that these safety standards are maintained.
3. Repairs must be made in accordance with the relevant safety standards.
4. It is essential that safety critical components are replaced by approved parts.
5. If mains voltage selector is provided, check setting for local voltage.

## ◆ Important Management Points Regarding Safety (Items Demanding Special Safety Precautions)

1. Securely fix the power transformer while confirming its marking specified in the following.

Suffix	Marking	Description	Model
J	5216508	UL approved No.	TD-W709
C	VTP52A5-021F		TD-W709
A/B/E/EN/G	VTP52Z5-021F		TD-W708
U/UT	VTP52G5-021F		TD-W708

2. Power cord : Make sure of the following markings and inspect exterior scratch and damage.

	Power cord	Attachment plug
J	SPT-1	KP-10W or SU-1P
C	SPT-1	KP-10W and SU-1P
E/EN/G	△VDE△	KP-419C and SE-1
B	BASEC BS6500	KP-610 3A and SE-1
U/UT	△VDE△	KP-8K
A	LTSA-2F	KP-560

3. Install the cord bushing by the specified tool while confirming the marking. Bushing : NIFCO 10p1(C/J) and 2271(A/B/E/EN/G).

### 4. Wiring terminal

- When installing the power cord, wind it around the terminal by the end before soldering.
- Arrange the wires while binding them nearby the terminal.
- The end of respective power cords is soldered in the air and the space from others must be 3.2 mm or

more in the distance.

- When arranging every wire and cable, avoid the active power parts, mobiles, heat generating parts, sharp-edged parts, etc.
- Since the following parts are heat generation ones, they must not contact with electrolytic capacitors, wires, etc.

- Parts are inflammables. Make sure of their lift-up condition for the purpose.
- Parts in box are out of JVC's control.

D902 Q905 Q912 QH851 R901 R921 R923  
R937 R938

Other parts

C903 C904 2200uF/25V C/J version (VEND TYPE)

- All fuses must securely be connected. In A/B/E/EN/G/U/UT version, F901 and F902 must be specified by the rating of 800 mA shown on the surface as well as by the marking of ⑤ or in U/UT version, F903 must be specified by the rating of 315 mA shown on the surface as well as by the marking ⑤ or ⑥.

## ■ Features

1. Twin reverse recording/playback decks for longer recording time
  - Continuous automatic or manual recording can alternate between decks A and B
2. Full-logic control mechanism in both decks
3. Double Dolby\* HX PRO headroom extension
4. Double Dolby B & C noise reduction systems
5. DDRP (Dynamics Detection Recording Processor) compatibility
 

The DDRP function is possible only when used with a suitable JVC CD player.
6. Auto tape select mechanism (Decks A and B)
7. Large FL display
  - 2-color peak level meter
  - Mechanism mode indicators
  - Double 4-digit linear counters
8. Synchro start (normal-/high-speed) dubbing
  - High-speed dubbing function reduces tape editing time by half
9. Multi music scan mechanism for either direction.
 

"Under License of Staar S.A., Brussels, Belgium"
10. Continuous playback
11. INPUT LEVEL control
12. Input BALANCE control
13. PITCH control (Deck A)
14. Metal tape compatibility
15. PHONES jack
16. Microphone mixing is possible
  - Microphone mixing during playback and recording
  - Microphone input level control provided
17. COMPU LINK-3/SYNCHRO terminal

\* Dolby noise reduction and HX Pro headroom extension manufactured under license from Dolby Laboratories Licensing Corporation. HX Pro originated by Bang & Olufsen.

\* "Dolby", the double-D symbol  and "HX PRO" are trademarks of Dolby Laboratories Licensing Corporation.

## ■ Specifications

Type	: Double cassette deck	Motors	: Electric governed DC motor for capstan × 1 DC motor for reel × 1 DC motor for mechanism drive × 1 (For both decks A and B)
Track system	: 4-track, 2-channel	Fast forward/ Rewind time	: Approx. 110 sec. with C-60 cassette
Tape speed	: 4.8 cm/sec (1-7/8 inch/sec) (Normal) 9.5 cm/sec (3-3/4 inch/sec) (High)	Input terminals	
Frequency response : (-20 dB recording)		LINE IN (× 1 circuit)	: Input sensitivity; 80 mV (0 VU) Input impedance; 50 kΩ
	TYPE IV tape; 20 – 17,000 Hz 30 – 16,000 Hz (±3 dB)	MIC × 1 (Monaural)	: Input sensitivity; 0.4 mV (-68 dBV) (0 VU) Matching impedance; 600 Ω ~ 10 kΩ
	TYPE II tape; 20 – 16,000 Hz 30 – 15,000 Hz (±3 dB)		
	TYPE I tape; 20 – 16,000 Hz 30 – 15,000 Hz (±3 dB)		
S/N ratio	: 58 dB (S = 315 Hz, k3 = 3%, N = A.WTD, type IV tape) The S/N is improved by about 15 dB at 500 Hz and by max. 20 dB at 1 kHz ~ 10 kHz with Dolby C NR on and improved by 5 dB at 1 kHz and by 10 dB at above 5 kHz with Dolby B NR on.	Output terminals	
Improvement of MOL	: 4 dB at 10 kHz with Dolby C NR on.	LINE OUT (× 1 circuit)	: Output level; 300 mV (0 VU) Output impedance; 5 kΩ
Wow and flutter	: 0.08% (WRMS), ±0.2% (DIN/IEC)	PHONES × 1	: Output level; 0.3 mW/8 Ω (0 VU) Matching impedance 8 Ω ~ 1 kΩ
Channel separation	: 40 dB (1 kHz)	Other terminals	: COMPU LINK-3/SYNCHRO × 2
Crosstalk	: 60 dB (1 kHz)	Power requirements	: AC 240 V, 50/60 Hz (Australia/U.K.) : AC 120 V, 60Hz (U.S.A.)
Harmonic distortion	: k3; 0.8% (TYPE IV tape, 315 Hz, 0 VU)	Power consumption	: With power switch on 23 W With power switch standby 5.7 W
Heads	: METAPERM head for recording/playback, 2-gap ferrite head for erasure; combination head × 1 (For both decks A and B)	Dimensions (W × H × D)	: 435 × 134 × 328 mm (17 - 3/16" × 5 - 5/16" × 12 - 15/16")
Weight	: 5.1 kg (11.3 lbs.)	Weight	: 5.1 kg (11.3 lbs.)
Accessories		Accessories	: Pin plug cord ..... 2 Remote cable ..... 1

Design and specifications are subject to change without notice.

## ■ Instructions (Extraction)

### ◆ Connections

- Do not switch the power on until all the connections are completed.
- Insert the plugs firmly, or poor contact will result, causing noise.
- When the pin-plug cords are employed, always connect the white plug to the left channel terminal. This helps to avoid reversed connections.
- When using the Compu Link Control System version 3, do not connect the power cord to the SWITCHED AC OUTLET of an amplifier or receiver. Otherwise, the automatic power on/off (STANDBY) function cannot be carried out.

#### 1. Connection to a stereo amplifier

##### Note:

When installing the deck, be sure to install at a distance from your amplifier. If they are stacked, noise (hum) may occur.

#### 2. Remote cable connection for COMPU LINK

- By connecting a remote cable, COMPU LINK functions (automatic power on/off (STANDBY), automatic source selection, synchronized recording and DDRP recording) can be performed. In this time the provided pin-plug cords must be also connected.
- When making synchronized recording with a CD player, connect the remote cable to the COMPU LINK-3/SYNCHRO jacks.

##### Notes:

1. When making synchronized recordings, only a single deck should be connected to the amplifier.
2. If a component is not a JVC COMPU LINK component, bypass it when making the remote cable connections.
3. This deck can be connected with an amplifier and a CD player which have the COMPU LINK-1/SYNCHRO jacks for COMPU LINK performance.(see page 10 for details)

#### 3. Recording through microphone

- Microphone having an impedance of  $600 \Omega$  to  $10 k\Omega$  can be employed.

##### Note:

- To avoid howling, turn the amplifier's volume down.

## ◆ Control Name of Their Functions

① POWER switch(ON/STANDBY)

② Cassette holder (Deck A)

③ A-deck EJECT button

④ COUNTER RESET button (Deck A)  
Press to reset the counter to "0.00"

⑤ Indicators

① DDP indicator

② HX PRO indicator (Deck A)

③ Peak level indicator

These indicators light according to the level of the signal being recorded or the level of the signal recorded on the tape.

Note:

0 dB : IEC (DIN) STANDARD LEVEL (250nWb/m)

0 VU : Signal level at 160nWb/m

00 : DOLBY NR STANDARD LEVEL

④ HX PRO indicator (Deck B)

⑤ Digital counter (Deck A)

The counter reading increases while the tape is running forward and decreases when it is running in reverse. In the Multi Music Scan mode when the << (or >>) button is pressed, the number of tunes which will be skipped is displayed.

⑥ Mechanism mode indicators (Deck A)

<< : This lights when in the rewind.

>> : This lights when in the fast-forward.

REC : Lights when the unit is in the record and record-pause modes; blinks during record muting.

II

PLAY

<<, >>

⑦ DUBBING >>

: Pause indicator

: This lights when in the playback.

: Indicates the direction of tape travel.

: ">" lights when in the normal-speed dubbing mode. ">>" lights when in the high-speed dubbing mode.

⑧ CONT

: Lights when the unit is continuous play or continuous recording mode.

⑨ Mechanism mode indicators (Deck B)

⑩ Digital counter(Deck B)

⑪ Indicates reverse mode.

⑥ COUNTER RESET button (Deck B)

⑦ B-deck EJECT button

⑧ Power STANDBY Indicator

⑨ Cassette holder (Deck B)

⑩ Cassette operation buttons (Deck A)

<<

: Press to wind the tape quickly from right to left.

>>

: Press to wind the tape quickly from left to right.

PLAY

: Press to play the tape.

■ (stop)

: Press to stop the tape.

II PAUSE

: Press to stop the tape temporarily during recording and playback.

Press the PLAY button to release the pause mode.

⑩ REC/REC MUTE : Press the PLAY button while pressing this button to start recording, and press to leave an appropriate non-recorded section. (See page 10)

◀▶ (direction) : Press to change the direction of tape travel.

**⑪ PITCH control (Deck A)**

Varies the tape speed in deck A in the range of about  $\pm 10\%$ . However, it cannot change the tape speed in the high-speed dubbing.

Turning it counterclockwise toward "SLOW" causes the tape speed to decrease while turning clockwise toward "FAST" causes it to increase. The center click position is for the standard speed. (See page 8.)

**⑫ PHONES jack**

Connect headphones (with an impedance of  $8\ \Omega$  to  $1\ k\Omega$ ).

**⑬ DOLBY NR switch (Deck A)**

Set to B or C for recording using the Dolby NR system or for playing back a tape that was recorded using the Dolby NR system.

Set to OFF when the Dolby NR system is not used.

**⑭ INPUT LEVEL control**

Adjust the recording level with this control. (See page 9.)

**⑮ Input BALANCE control**

Adjusts the balance between the signals input via the left and right LINE IN jacks.

**⑯ DOLBY NR switch (Deck B)**

⑰ MIX MIC jack

Connect microphones (with an impedance of  $600\ \Omega$  to  $10\ k\Omega$ ) to these jacks.

Sounds from microphone are monaural.

**⑱ Mixing microphone level control**

Adjust the microphone input level.

**⑲ Cassette operation buttons (Deck B)**

For the operations of the buttons, refer to "⑩ Cassette operation buttons (Deck A)".

■ (stop): Press to stop dubbing.

**⑳ REVERSE MODE switch**

Select the single side or both sides record/playback mode, or the continuous play mode.

•  $\rightleftarrows$  : For single-side recording or playback.

•  $\Rightarrow$  : To play or record both sides A and B.

•  $\circlearrowleft\circlearrowright$  : To play sides A and B continuously.

**㉑ A  $\Rightarrow$  B SYNCHRO DUBBING button**

• NORM SPEED : Press to perform normal-speed dubbing.

• HIGH SPEED : Press to perform high-speed dubbing.

## ◆ Cassette Loading

1. Press the EJECT button to open the cassette holder.
2. Load a cassette as shown.
3. Press the cassette holder to close it.

Be sure to obtain the click sound to close the holder securely.

### Notes:

- If the power cord is pulled out while the tape is moving, you might not be able to remove the cassette. If this happens, plug it in again before attempting to remove the cassette.

## ◆ Playback

### Playback of deck A

Operate in the order of the numbers in the illustration.

- 1 Press the POWER switch to set to ON.
- 2 Load a prerecorded cassette with side A facing out.
- 3 Select the side to be played back.  
Side A... Forward direction (< PLAY >)  
Side B... Reverse direction (<< PLAY >>)
- 4 Set the DOLBY NR switch to the same position as when the tape was recorded.
- 5 Select the REVERSE MODE.
- 6 Press the PLAY button of deck A to start playback.

- When the deck contains a tape, the deck is turned on automatically and the tape is played back by only pressing the PLAY button.
- To stop playing back midway .... Press ■ (stop) button.

### Playback of deck B

Perform steps ② to ⑥ of the above procedure for deck B.

### Continuous play

First set the REVERSE MODE switch to <<>>.

Load cassette tapes in both decks and press the PLAY button of the deck to be played first for continuous play of both decks.

- When playback in the reverse direction ends, the deck switches to the standby mode in the forward direction. At this time, the other deck starts playback. This operation is repeated between decks A and B.
- While one deck is playing back, the cassette in the other one can be replaced. This is convenient to the long-time playback of background music.
- Press the ■ (stop) button of the deck that is running to stop continuous play.

### MICROPHONE MIXING DURING PLAYBACK

By connecting a microphone, microphone mixing with playback sound from deck A or deck B is possible.

### MULTI MUSIC SCAN

- The multi music scan mechanism of this unit allows you to quickly locate the beginning of a specific tune (up to 99 tunes before or after the current tune).
- The multi music scan mechanism functions by detecting non-recorded sections between tunes (of more than 4-5 sec.).
- The illustration shows the forward direction.

Example of fast forward scan

## ◆ Recording

### Procedure

1. Press the PLAY and  $\ll$  (or  $\gg$ ) buttons simultaneously.
2. When more than 2 tunes are to be skipped, after procedure 1 press the  $\gg$  (or  $\ll$ ) button the number of times you want to skip tunes. The number of tunes to be skipped is displayed in the counter.
- Relation between Multi Music Scan and REVERSE MODE.
  - $\Rightarrow$  : The Multi music scan mechanism operates on one side of the tape only. If the number set is too high (more than there are tunes remaining on that side), the tape stops when the end of tape is reached.
  - $\Rightarrow$  : It operates continuously through one cycle of the A and B sides of the tape. If the number set has not been reached, the tape stops at the end of the B side.

When the head rotates to play side A from B or B from A, this rotation is counted as one non-recorded section. When a recorded tune continues from side A to B, this tune is recorded as two tunes. In such a case, press the  $\ll$  (or  $\gg$ ) button one extra time.

### Notes:

In the following cases, the mechanism may not operate correctly. This is not a malfunction; use the mechanism according to the type of program.

- Tapes with tunes having long pianissimo passages (very quiet parts) or non-recorded portions during tunes.
- Tapes with short non-recorded sections.

### PITCH CONTROL (Deck A)

It is possible to vary the tape speed in deck A in the range of about  $\pm 10\%$  in the playback mode. The center click position is for the standard tape speed.

### Example of recording with deck B

Operate in the order of the numbers in the illustration.

- Make sure the safety tab of the cassette has not been broken off.
- 1 Press the POWER switch to set to ON.
- 2 Load a cassette for recording.
- 3 Set the DOLBY NR switch as required.
- 4 Select the REVERSE MODE.
- 5 Select the side to be recorded.
- 6 Press the  $\square$  PAUSE button and  $\circ$  REC/REC MUTE button (record-pause mode). REC lights and PLAY indicator flashes.
- 7 Adjust the recording level and balance. (See page 9.) The BALANCE control only works with line input.
- 8 Press to "0.00".
- 9 Press the PLAY button to start recording.

### Notes:

- When the safety tabs are removed from a cassette tape, the tape cannot be recorded even if you try. Make sure that both tabs are still in place when performing both sides recording.
- When the tape is played or recorded in the reverse direction (side B), only side B is played back or recorded and then the tape stops automatically.

It should be noted that it may be unlawful to re-recorded tapes, records, or discs without the consent of the owner of copyright in the sound or video recording, broadcast or cable programme and in any literary, dramatic, musical, or artistic work embodied therein.

**DDRP (Dynamics Detection Recording Processor) recording**  
DDRP recording is performed with suitable JVC CD players and the recording level adjustment is performed automatically.

Since recording level adjustment is performed automatically for different types of tape (normal,  $\text{CrO}_2$  and metal), the adjustment of INPUT LEVEL control is not required.

- Read the instruction book of your CD player carefully.

## ALTERNATE CONTINUOUS RECORDING BETWEEN DECK A AND DECK B WITH AUTOMATIC SELECTION

- Load the tapes to be recorded in decks A and B with sides A facing out. (Be sure to wind past the leader tapes.)
- Press the  $\blacktriangleleft\triangleright$  (direction) button to select the tape transport direction of decks A and B.
- Set the DOLBY NR switch as required.
- Set the REVERSE MODE switch to  $\square\square$ .
- Set deck A to the record-pause mode and adjust the recording level.
- Set deck B to the record-standby mode. (press only the  $\bigcirc$  REC/REC MUTE button.)  
In this time, the REC and CONT indicators light.
- Press the PLAY button of deck A; continuous recording starts.

- When side B of deck A finishes recording, deck B starts recording automatically. If both decks start recording from the beginning of side A, the continuous recording will be done for about 3 hours with two C-90 tapes. When starting recording from deck B, set deck B to the record (or record-pause) mode first and set deck A to the record-standby mode.

### To cancel the record-standby mode.

Press the ■ (stop) button on the deck during record-standby.

## MICROPHONE MIXING DURING RECORDING

By connecting a microphone, microphone mixing during recording is possible by following the recording procedure on page 4. Adjust the microphone input level by setting the record-pause mode and observing the peak level indicators.

- When the record-pause mode is set and the INPUT LEVEL control is set to MIN, sounds are output only from the microphone, and it can be used as a public address system.

## RECORDING LEVEL ADJUSTMENT

Adjust the recording level while observing the peak level indicator indication.

For example:

With Type IV (metal) tape

Because of metal tape's higher saturation level, it is OK that "+2" lights occasionally.

With Type I (normal) or Type II (chrome) tape

It is OK that "+0" lights occasionally.

- When the recording level is too low, the hiss noise inherent in the tape will be conspicuous.
- When the recording level is too high, exceeding the saturation level, the recording will contain cracking noise and will be distorted.

It is best to adjust so that the maximum sound level of the source to be recorded reaches the very limit of the saturation level of the tape to be used.

The best level varies depending on the type of music and type of tape so it is better to make test recording, using FM music, records, etc.

## DOLBY NR and DOLBY HX PRO

### Dolby NR System

To reduce the hiss inherent in tape recording, use the Dolby NR System when making recordings. When listening to a tape recorded with the Dolby NR system, set the DOLBY NR switch to B or C according to the system selected in the recording mode.

### Note:

The sound quality will change if the positions of the DOLBY NR switch are different in recording and playback.

### Dolby HX PRO headroom extension

Dolby HX PRO headroom extension system controls the bias current so that the effective bias is constant even when there are fluctuations in the high-frequency components of the input signal.

This greatly improves the high-frequency saturation level while reducing the low-frequency signal level variations and distortion. When a source which contains many high-frequency components is recorded, these high-frequency signals have the same function as bias and therefore, the effective bias current changes. This will result in phenomena such as changes in the level of low-frequency signal and subsequent distortion and reduction of the high-frequency saturation level.

- The dynamic sound recorded with this system sounds the same even when the tape is played back in a deck that does not have Dolby HX PRO.
- This system automatically works when in recording; however, Dolby HX PRO is not a noise reduction system.

### Erasing

When recording on a prerecorded tape, the previous recording is automatically erased and only the new program is recorded on the tape.

### To erase a tape without making a new recording...

Follow the section "RECORDING" but in step 7, set the INPUT LEVEL control to MIN.

### AUTOMATIC RECORD MUTING

#### A. To leave non-recorded sections of about 4-5 seconds automatically

1. When the undesired section comes during recording, press the O REC/REC MUTE button and release it.
2. The REC indicator flashes and a non-recorded section is made during record muting operation.  
About 4-5 seconds later, the tape automatically stops, and the unit enters the record-pause mode.
3. Press the PLAY button to start recording again.

#### B. To leave non-recorded sections of more than 4-5 seconds

1. Keep the O REC/REC MUTE button pressed continuously as long as you want to make a non-recorded section. By releasing the finger from the button after the above operation, the unit enters the record-pause mode.
2. Press the PLAY button to start recording again.

#### C. To leave non-recorded section of less than 4 seconds

When the undesired section comes during recording....  
After the O REC/REC MUTE button is pressed, press the PLAY button before the unit enters the pause mode to start recording again, or press the II PAUSE button to enter the record-pause mode.

- The peak level indicator lights even during record muting according to the input level which can be heard from the speakers or headphones so that recording can be resumed at the exact point on the tape.

## ◆ Compu Link Control System

### COMPU LINK Control System

The Compu Link Control System controls relative operations between components automatically and facilitates various operations.

This is a system originated and developed by JVC for facilitating various system operations. (For version 1 components, "COMPU LINK-1 / SYNCHRO" is marked on the rear panel. For version 3 components, "COMPU LINK-3 / SYNCHRO" is marked on the rear panel. This unit belongs to version 3.)

The version 3 system controls relative functions between this unit and an amplifier or receiver, in addition to all of the functions of version 1.

### Automatic Power On/Off (STANDBY) Function (COMPU LINK-3)

This function is works when an amplifier or receiver having a

COMPU LINK-3/SYNCHRO terminal is connected. For example, if a deck contains a tape, the deck is turned on automatically and the tape is played back by only pressing the PLAY button. When the amplifier or receiver is switched STANDBY, the source unit is automatically switched STANDBY.

### Automatic Source Selection (COMPU LINK -1,3)

When the provided remote cables are used for connecting this unit to other components which have COMPU LINK-1 or 3/SYNCHRO terminals, the switch-over of all system components is possible with simple one-touch of the source selector button of JVC's amplifier or receiver.

By doing this, the corresponding component will start playing automatically.

The source select button of the remote control unit or the activation button of the desired component can be also used for this purpose. When the components have been switched over, the previous component will stop playing within five seconds.

### Synchronized Recording (COMPU LINK -1,3)

Synchronized recording refers to the process in which the deck starts recording in synchronism with the CD player. Perform the synchronized recording as follows:

1. Set the cassette deck to the record-pause mode in accordance with the recording procedures on page 9.
2. If you want the programmed recording, program the desired tunes in any order you wish to hear.
3. Press the PLAY/PAUSE button of the CD player. By so doing, the cassette deck is placed in the record mode and synchronized with the CD player for recording. Synchronized recording thus can be made possible.

### DDRP (Dynamics Detection Recording Processor) recording

The DDRP function makes possible fully automatic recording when used with a suitable JVC CD player. When the DDRP button of a suitable JVC CD player is pressed, the recording level is first adjusted automatically, then recording starts; it is not necessary to start recording by the normal procedure.

### Notes:

- Synchronized recording or DDRP recording stops automatically when the CD player stops playing.
- Synchronized recording does not start except when the record-pause mode is set by simultaneously pressing the O REC/REC MUTE and II PAUSE buttons in the stop mode.
- To cancel synchronized recording or DDRP recording, press the STOP button of the CD player or cassette deck.
- The source is locked to the CD position during synchronized recording or DDRP recording to avoid accidental stops or switch-over to another component. To switch over the components, cancel synchronized recording or DDRP recording first.
- The INPUT LEVEL control does not function during DDRP recording.

## ◆ Dubbing

- Synchro dubbing

- ① Press the POWER switch to set to ON.
- ② Insert a prerecorded tape into deck A with side A facing out and press the <right> (direction) button to select the travel direction.
- ③ Insert the blank tape with side A facing out into deck B, and press the <right> (direction) button to select the side to be recorded.
- ④ Press to "0.00".
- ⑤ Press the SYNCHRO DUBBING (NORM or HIGH SPEED) button to start dubbing.
- ⑥ Press the ■ (stop) button of deck B to stop dubbing.

When deck B stops, the dubbing mode is automatically released.

- Synchro record muting

When deck A stops or enters any mode other than the playback mode during dubbing, deck B enters the record mute operation automatically and then enters the record-pause mode.

- Before pressing the SYNCHRO DUBBING button

Confirm that both decks are in the stop mode before starting dubbing.

### Input level

Recording is performed at the same level as the playback tape during dubbing regardless of the position of the INPUT LEVEL control.

### Microphone mixing during dubbing

By connecting a microphone, microphone mixing during dubbing is possible with the playback sounds from deck A. Be sure to perform dubbing at normal speed.

### Dubbing and DOLBY NR switches

During normal-speed dubbing, the NR mode of deck A should be set to match the NR mode of the cassette to be copied. The NR mode of deck B may be set as you wish. Recording on the cassette in deck B will take place in accordance with the NR mode setting for deck B.

During high-speed dubbing, the same NR mode selected for the playback cassette is applied to the recording cassette, regardless of the position of the deck B NR switch.

### Tape editing

1. Press the O REC/REC MUTE button when finished dubbing a tune.
2. Deck B automatically enters the record muting mode and leaves a non-recorded section of about 4 seconds then enters the record-pause mode.
2. Press the ■ (stop) button of deck A and search for the next tune you want by using the >>, << or PLAY button. Then stop the cassette just before the beginning of the tune.
3. Press the same SYNCHRO DUBBING button pressed before the pause again, and dubbing will start.

### Notes at dubbing

1. Normal-speed dubbing is recommended to obtain good sound quality.
2. Television receivers placed close to the deck may cause interference on the recorded signal when the deck is used in the high-speed dubbing mode. If this happens, either turn off the television receiver or use the normal-speed dubbing mode.

## 1 Location of Main Parts

## 2 Removal of main parts

### ■ Enclosure Section

#### ◆ Top cover(see Fig 2 - 1)

1. Remove four screws ① retaining the top cover from both side.
2. Remove two screws ② retaining the top cover from the back side.
3. To remove the top cover ,slide in direction of arrow and lift away(refer to Fig 2 - 1)

Fig 2 - 1

#### ◆ Front panel assembly

1. Remove the top cover as described in above.
2. Remove three screws ④ retaining the front panel ass'y from bottom side.
3. Release the front panel ass'y from two pawls in the front and bottom sides and draw it to the front side.
4. Disconnect all connectors between the mechanism ass'y, front panel ass'y and the main board ass'y.
5. Remove two screws ③ retaining the lugass'y and main board ass'y.

Fig 2 - 2

#### ◆ Mechanism assembly

★ Although the mechanism assembly can be removed without detaching the front panel ass'y, it is recommended to detach the front panel ass'y to do the work with ease.

1. Remove four screws ⑤ from the corners of the mechanism.(see Fig 2 - 5)
2. Open the door and remove the mechanism ass'y.  
(At this time, door lock arm spring and door lock arm are removed together with.)
3. For moving the mechanism ass'y only ,disconnect the following wirings.

a)Mechanism ass'y side(Refer to Fig 2 - 4)

Top side connector of the cam switch board(CN2).

Connector of the motor board(CN1).

b)Main board ass'y side(Refer Fig2 - 3)

Disconnect wire coming from the leaf switch from CN703/CN704 at deckB and CN701/CN702 at deckA.

Disconnect wire coming from the head relay board

CNA81 at deckA and CNA85 at deckB.

Fig 2 - 3

Push up with a screwdriver, etc. 1

Fig2 - 4

### ◆ Eject arm ass'y

1. Remove two screws ⑫ retaining the shield plate.
2. Remove two screws ⑦ retaining the eject arm ass'y and pull it out.(DECK A, DECK B)

### ◆ Mechanism holder and door ass'y

1. Remove four screws ⑧ retaining the mechanism holder.
2. Remove the damper ass'y(for easy reassembling work).  
Insert an ordinary( - )screwdriver or the like in to the gap between the damper and the front panel to disengage the pawl, and draw the damper ass'y outwards.(see Fig 2 - 6)
3. Remove the arm shaft of the cassette holder (door ass'y)from the mechanism holder.(The door spring is engaged with the door side by the bent side.)

### ◆ FL board/Volume board ass'y

1. After removing the mechanism holder, proceed to the following steps.
2. Pull out the INPUT volume knob.
3. Remove seven screws ⑨ retaining the p.c.board.
4. Lift the board right upwards to remove it since it is connected to the mechanism control key board with connector pins(CN712/CN713).

### ◆ Headphone and MIC jack ass'y

1. Remove the PLAY button.
2. Pull the jack ass'y outwards wile pushing it down toward the bottom side to remove it.

### ◆ Mechanism keyboard ass'y

1. Remove two screw ⑩ retaining the board ass'y.
2. Do the same for the other side.

### ◆ Main board ass'y (see Fig2 - 3, Fig 2 - 1)

1. Remove three screws ⑪ retaining the board.
2. Remove four screws ⑭ retaining the board to the rear panel(see Fig.2 - 1) .

### ◆ DOLBY NR / REC board ass'y

To remove the DOLBY NR / REC board on the Main board, spread pawls of the board connector outwards while taking out the board ass'y.

How to remove damper

Fig 2 - 6

How to engage the door and eject spring

● Reassembling procedure of the front panel ass'y

1. Attach the mechanism control switch board to the panel with one screw.
2. Install the FL board .
3. Put the door ass'y and the mechanism holder together with on the front panel.
4. Attach the mechanism holder to the front panel ass'y with two screws.
5. Engage the door spring properly.
6. Install the damper .(Push the pawl side last to engage it.)
7. Install the eject arm ass'y.
8. Install the mechanism ass'y
9. Engage the eject spring.

Fig 2 - 9

■ Cassette mechanism section

◆ Head mount assembly (Fig2-9, Fig2-10)

1. Release the head wire relay board from two pawls.
2. Remove two screws ① retaining the head mount ass'y.
3. Remove the head gear (1) and head spring.

◆ Pinch foller assembly (Fig2-9, Fig2-11)

1. Remove return spring by disengaging the pawl hooking it.
2. Remove the pinch roller spring.
3. For reengaging the spring, refer to the figures (A) and (B). ( see Fig 2 - 11)

Fig 2 - 10

Fig 2 - 11

◆ **FM bracket/Capstan motor assembly (Fig.2-12,2-13)**

1. Remove soldering to separate the drive motor and the motor ass'y. (Mechanism A or B)
2. Remove one screw ② retaining the FM bracket together.
3. Remove two screws ③ and disengage five pawls, and then the FM bracket and the capstan belt (mechanism A and B) can be removed.
4. Remove two screws ④ retaining the capstan motor from the FM bracket.
5. For reengaging the capstan belt, refer to Fig.2-14.

Fig 2 - 12

◆ **Actuator motor assembly (Fig.2-15)**

1. Release the actuator motor ass'y from three pawls.

Fig 2 - 13

Fig 2 - 14

Fig 2 - 15

Fig 2 - 16

◆ **Flywheel assembly (Fig.2-16, Fig.2-17)**

1. Remove washers from the capstan shaft and draw them out.

Fig 2 – 17

◆ **Drive motor (Fig.2-15, Fig.2-18)**

1. Pull out the gear and arm assembly from the drivemotor shaft.
2. Remove screw ⑤ retaining the drive motor.
3. Disengage four pawls to release the drive motor.

Fig 2 – 18

◆ **Cam switch board (Fig.2-16, Fig.2-19)**

1. Release the cam switch board from six pawls.
2. For gearing between the cam switch board and controlcam, see the magnified illustration in a circle.

◆ **Actuator gear (large) (Fig.2-16, Fig.2-20)**

1. Release the actuator gear (large) from three pawls.

◆ **Control cam (Fig.2-16, Fig.2-20)**

1. Release the control cam from two pawls.
2. For assembling the control cam, see the magnified illustration in a circle.

◆ **Actuator gear (small) (Fig.2-16, Fig.2-20)**

1. Release the actuator gear (small) from two pawls.

Fig 2 – 19

Fig 2 – 20

## 3 Main Adjustment

### ◆ Measuring instruments required for adjustment

- (1) Low-frequency oscillator(oscillation frequency 50Hz~20kHz, 0dB output with 600 Ω impedance )
- (2) Attenuator(600 Ω impedance)
- (3) Electronic voltmeter
- (4) Standard tapes
  - VTT712(tape speed, wow and flutter measurement)
  - VTT724(reference level)
  - TMT735, VTT739(playback frequency)
  - VTT704(12.5kHz)(azimuth)
  - TMT6447, TMT6448(Music scan)
- (5) Recording reference tapes
  - TS-12(UD1), TS-10(AC-513)(SA),
  - TS-11(AC-712)(MA)or equivalent
- (6) 600 Ω resistors(for attenuator matching)
- (7) Distortion meter(bandpass filter)
- (8) Torque gauge(cassette)for CTG-N, TW2111, TW2121 and TW2231 mechanism adjustments.
- (9) Wow & flutter meter
- (10) Frequency counter meter
- (11) M300 gauge
- (12) Band pass filter

### ◆ Power supply voltage

Set the line voltage selector switch to 240V/ 230V/ 220V/ 127V/ 120V/ 110V according to 

your local voltage.

AC240V, 50/60Hz :A/B version

AC230V, 50/60Hz :E/EN/G version

AC120V, 60Hz :C/J version

AC230/127/110V, 50/60Hz:U/UT version

### (13) Standard position of the switch and volume knob

Switches and volume knobs Setting position.

INPUT LEVEL	:	MAXIMUM
DOLBY NR SWITCH	:	OFF
BALANCE CONTROL	:	CENTER
PITCH CONTROL	:	CENTER
TIMERSWITCH	:	OFF
MIC LEVEL	:	MINIMUM
H.PHONE VOLUME	:	MAXIMUM

(14) Standard level (0dBs) is 0.775V unless otherwise specified.

### ◆ Mechanical adjustment

After head replacements,use the following method to check after the hight, direction (rough of each head have been adjusted.

#### Tape travel adjustment

Use the M300lig. Be careful not to damage the head.

#### Tape guide adjustment method

Direction of guide movement

Use the jig to move in the direction of the arrow.

## ◆ Mechanism Adjustment

Item	Conditions	Adjustment and Confirmation	Standad value	Adjust point
Adjusting Head azimuth	Test tape :VTT704 (12.5kHz)	<ol style="list-style-type: none"> <li>1. Connect an electronic voltmeter to the LINE OUT terminals.</li> <li>2. Play back the VTT704 (12.5kHz) test tape.</li> <li>3. Adjust the head angle with the screw (FWD and REV) until the reading of the electronic voltmeter becomes maximum for both channels (phase difference must be "0".)</li> <li>4. Repeat the adjustment in FWD and REV modes as well as for the decks A and B.</li> </ol>	Maximum	Screws (FWD, REV)
			Deck B	
			Deck A	
Adjusting motor speed	<ol style="list-style-type: none"> <li>1. For high speed adjustment, set the deck for play mode and shortcircuit between TP - 701 and GND.</li> <li>2. Do not do anything while TP701 and GND are shortcircuited.</li> <li>• Pitch control: Center</li> </ol>	<ol style="list-style-type: none"> <li>1. Connect a frequency counter to the LINEOUT terminals.</li> <li>2. Perform normal speed adjustment first, and then do high speed adjustment</li> <li>3. Play back the VTT712 test tape.</li> <li>4. Adjust for deck <b>A</b> : Ajust VR701 for normal speed at 3000Hz, and VR702 for high speed at 6000Hz Adjust for deck <b>B</b> : Adjust VR703 for normal speed at 3000Hz, and VR704 for high speed at 6000Hz.</li> <li>5. Difference in FWD and REV frequencies must be less than 45Hz.</li> </ol>	Normal speed: Deck <b>A</b> ; 3000 ± 15Hz Deck <b>B</b> ; 3000 ± 15 Hz  High speed : Deck <b>A</b> ; 6000 ± 30 Hz Deck <b>B</b> ; 6000 ± 30Hz	Deck <b>A</b> : Normal;VR701 High ; VR702 Deck <b>B</b> : Normal;VR703 High; VR704
Checking wow and flutter		Connect a wow and flutter meter to LINE OUT terminals. Play back the VTT712 test tape. Check to see if the reading of the meter is within 0.18% (WRMS).	0.18% (WRMS)	
Checking play back torque		Employ a torque testing cassette tape (TW2111[FWD] / TW2121[REV] for the checking, or remove the cassette cover and use a torque gauge.	27 – 60 gr – cm	
Checking fast forward/rewind torque		Measure the torque in the fast forward mode in the same manner as in the above. Test cassette : TW2231	90 – 200gr – cm	

## ◆ Location of Adjusting point

## ■ Electrical Circuit Adjustment Procedures

Make the following adjustments after the tape travel and head angle adjustments.

- In principle , the adjustments should be made in the order described.
- Adjustments required head replacement are marked with an asterisk(\*)

Item	Adjustment and Checking Methode		Frequency Level	Output Value & Deviation
DOLBY NR circuit record- ing check	Signal Input : LINE IN cal. level 400Hz – 8dBs Output terminal : ICD81, ICD85( 15 & 16 pin)	DOLBY B (REC)	1 kHz Cal – 40dB	+5.7dB ± 2dB
			5kHz Cal – 20dB	+3.5dB ± 1.5dB
			1kHz Cal 0dB	0dB ± 0.5dB
		DOLBY C (REC)	1 kHz Cal – 40dB	+16dB ± dB
			5kHz Cal – 20dB	+2.9dB " ± 2.9dB
			1kHz Cal 0dB	0dB ± 1dB

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
*1 Playback level adjustment	Test tape VTT724:1kHz Measurement point LINE OUT NR Switch : OFF	Play back VTT724, then confirm that the level at LINE OUT is $-7.5\text{dBs} \pm 0.5\text{dB}$ . Adjust VRA15, VRA25 and VRA11, VRA21 so that LINE OUT level be come $-7.5\text{dBs}$ .	LINE OUT $-7.5\text{dBs} \pm 0.5\text{dB}$ H.Phone out $-24\text{dBs} \pm 2\text{dB}$	Deck A L : VRA15 R : VRA25 Deck B L : VRA11 R : VRA21
*2 Playback frequency response adjustment	Test tape TMT735 : 1kHz/12.5kHz VTT739 : 1kHz/63Hz Measurement point LINE OUT NR Switch : OFF	Playback TMT735 test tape, and adjust VRA16, VRA26 (deck B) and VRA12, VRA22 (deck A) so that deviation of 12.5kHz to that of 1kHz is $0.5 \pm 0.5\text{dB}$ . Then, playback VTT739 test tape to confirm that deviation of 63Hz to 1kHz is $+2 \pm 3\text{dB}$ .	With 12.5kHz as reference, $0.5 \pm 0.5\text{dB}$ at 1kHz 63Hz (check): $+2 \pm 3\text{dB}$	Deck B L : VRA16 R : VRA26 Deck A L : VRA12 R : VRA22
*3 Bias frequency adjustment	Frequency counter Measurement point CNG 81(deck A) CNG 85(deck B) TAPE switch : METAL	Connect a frequency counter to the CNG81 or CNG85 and adjust LE801 or LE851 so that the counter reads 95kHz.	$95\text{kHz} \pm 0.5\text{kHz}$	Deck B LE851 Deck A LE801
*4 Slave oscillation (HX PRO) adjustment	DC voltmeter Measurement point CNG 81(deck A) CNG 85(deck B)	This step must be preformed after the bias frequency adjustment. Load a metal tape and set the deck to the recording mode. Adjust for deck B Adjust LG151 and LG251 to minimize respective voltages to CNG85(PIN 3 – 5), L ch and (PIN3 – 4), R ch Adjust for deck A Adjust LG101 and LG201 to minimize respective voltages to CNG81(PIN 3 – 5), L ch and (PIN3 – 4), R ch	Minimum	Deck B L : LG151 R : LG251  Deck A L : LG101 L : LG201
*5 REC/PB frequency response adjustment	LINE INPUT level : Ref. $-20\text{dB}$ ( $-39\text{dBs} \pm 2\text{dB}$ ) MIC INPUT level : Ref. $-20\text{dB}$ ( $-66\text{dBs} \pm 3\text{dB}$ ) NR switch : OFF	This step must be performed after the slave oscillation adjustment. record the 1kHz and 12.5kHz signals at the level of $-20\text{dB}$ (20dB lower than the reference level). Playback the recorded signals, adjust VRG15, VRG25 and VRG11, VRG21 so that the level of the 12.5kHz signal is $0 \pm 0.5\text{dB}$ to the level of the 1kHz signal.	12.5kHz level : $0 \pm 0.5\text{dB}$ higher than the 1kHz level.	Deck B L : VRG15 R : VRG25 Deck A L : VRG11 R : VRG21

Item	Conditions	Adjustment and Confirmation	Standard Value	Adjusting
*6 Recording level adjustment	Input level : LINE - 19dBs ± 2dB MIC - 68dBs ± 3dB NR switch : OFF TAPE switch : Normal	1) Apply 1kHz signal to the LINE IN terminals, record 1kHz signal at - 19dBs input for both (Land R) channels on a normal tape. 2) Playback the recorded part, and adjust the recording level controls so that LINEOUT terminal level becomes - 8dBs. Then adjust for VRB15, VRB25 and VRB11, VRB21 so that LINE OUT terminal level be comes - 8dBs.	Normal : - 8dBs ± 0.5dB CrO2/Metal : - 8dBs ± 2dB	Deck B L : VRB15 R : VRB25 Deck A L : VRB11 R : VRB21
7 Maximum output check		Supply 1kHz signal LINEIN terminal in the Rec. monitoring mode, and non-clipped signal level at LINE IN terminal.	LINE OUT : more than 8dBs H.PONES OUT : more than - 16 dBs	
8 DDRP check	Light the DDRP dindicator	With the DDRP switch set to ON, supply 1kHz - 10.8dBs input signal in the rec paus mode and check the signal level at the LINEOUT-terminal.	Normal : - 11dBs ± 2dB Meetal : - 8dBs ± 2dB	
	Put out the DDRP indicator	With the DDRP switch set to OFF, performe the same check as in the abobe step.	Normal : +1.2dBs ± 2dB Metal : +1.2dBs ± 2dB	
9 Checking record/play-back distortion		1) Record a 1kHz, - 19dBs signal to LINE IN terminals. 2) Playback the recorded part, Check the output with a distortion meter to see if the value conforms to the standard value.	Normal : Less than 2% CrO2/Metal : Less than 3%	
10 Checking signal to noise ratio recording playback		1) Record a 1kHz, - 19dBs signal,stop the input du disconnecting from the terminal to perform non-signal recording. 2) Playback the recorded part. Measure the - 8 dBs recrding output and the non-signal recording output for comparation using an electronic voltmeter.Chek to see if the value conforms to the standard value.	Normal / CrO2 : More than 41dB Metal : More than 41dB	
11 Checking erasing coefficient		1) Apply a 1kHz, +20dB signal to the LINE IN terminals. 2) Perform recording with the signal enhanned by 20dB 3) Erase a part of the recording. 4) Measure the output difference between the erased part and non-signal part to compare with an electronic voltmeter. For the measurement using a metal tape, connect a band pass filter between the deck and the electronic voltmeter.
